

What's Coming Next

Clearer delivery dates · easy disputes & refunds · see everything before you pay

A plain-English overview for the UK2ME team · 2 June 2026

We're upgrading UK2ME so your customers always know **when their order will arrive**, can **sort out any problem easily**, and can **see the full picture before they pay**. This overview explains what's changing in everyday language — the technical plan lives in the separate developer work plan.

1. What your customers will notice

Clear delivery dates on every order

Instead of a vague "5–10 days", each order shows a **despatch day** and an **estimated arrival window** in Lagos, worked out automatically.

A weekly despatch rhythm customers can rely on

We send orders out **every Thursday** from both the UK and the USA. The system knows this and tells the customer which Thursday their order will make.

A faster option for UK orders

UK shoppers can choose **Express** — both for getting the item to our UK hub and for the trip to Lagos. (Express isn't offered on US orders.)

A "Delivery Note" before payment

Before paying, the customer sees a simple note: the journey, the chosen speed, the despatch Thursday and the expected delivery window — so there are **no surprises**. Your team can see the same note in admin.

Easy disputes & refunds

A clear **"Report a problem / Request a refund"** button on each order. The customer and your team get **email updates at every step** until it's resolved.

Reliable email updates

Every important step — order placed, invoice ready, payment received, shipped, delivered, dispute, refund — sends an email that **actually arrives**, with delivery tracked internally.

2. How the delivery timing works

Every order travels in three simple stages. The system adds them up (and lands on the right Thursday) to give an arrival window:

STAGE	WHAT HAPPENS	STANDARD	EXPRESS UK ONLY
1. To our hub	The shop sends the item to our UK or US warehouse	3–5 days	1–2 days
2. Despatch day	We ship out every Thursday from the UK & US	Weekly — Thursdays	
3. To Lagos	From our warehouse to Nigeria	5–10 working days	2–3 working days

Example — A UK customer orders on a **Monday** (standard speed). The item reaches our UK hub by mid-week, makes **that Thursday's despatch**, and arrives in Lagos roughly **1–2 weeks later**. If the item would miss Thursday's cut-off, the system simply quotes the **following Thursday** — honestly, up front.

All these timings are **adjustable by your team** from the admin settings, so if despatch days or typical shipping times change, we update them without needing new software.

3. Disputes & refunds, step by step

- 1 The customer opens an order and taps **"Report a problem / Request a refund"**, choosing a reason and adding details.
- 2 You and the customer both get an **email confirming the issue is logged**.
- 3 Your team reviews it in admin and marks it **under review**, then either **resolves** (with a refund if agreed) or **declines** with a note.
- 4 The customer is **emailed at each step**. When a refund is approved, you send the money the usual way and the order is marked **refunded** for a clean record.

4. The rest of this upgrade (recap)

Alongside the delivery and dispute features, this phase also delivers what we agreed earlier:

- **Separate UK (£) and US (\$) baskets** — customers shop one region at a time, with the right currency and rules.
- **Staff-built invoices you approve and pay** — the order stays pending until the customer pays, and the customer sees a clear cost breakdown.
- **An alert to your team the moment an order is placed**, including the product link, so you can review it quickly.

5. Roughly how long

The delivery dates, delivery note, and dispute/refund features add about **one to one-and-a-half weeks** of work on top of the core upgrade. The delivery date calculator can be built straight away, in parallel with the rest.

6. A few things we need from you

To finish these features exactly the way you run the business, please confirm:

- **Cut-off for Thursday despatch** — by which day must an item reach our hub to make that week's Thursday? (We've assumed Wednesday.)

- **Express** — confirm it's **UK-only**, and whether customers pick it themselves at checkout or request it from your team.
- **Refund rules** — how long after delivery can a customer request a refund, and do you allow **partial** refunds or full only?
- **Costs to confirm** (from earlier): US minimum service charge & threshold, the international transfer fee, the Nigeria per-kg rate, and delivery beyond Lagos.
- **Which inbox** should receive the new order & dispute alerts?
